CALIBRATION NUMBER IDENTIFICATION

To identify the calibration number of an engine installed in a vehicle, find the engine code label. On V6 and V8 engines, the label is located on the front of the left valve cover and the side of the right valve cover. On 4 and 6 cylinder engines, the code label is on the front of the valve cover.

Refer to the illustration to identify the calibration number. Using engine displacement and the calibration number, find the proper vacuum diagram in this index.

NOTE — Some Ford Motor Co. calibration numbers are carried over from 1978; the first digit of these numbers will be an "8". All other codes should begin with a "9".

NOTE — See the 1979 Emission Control Application tables for a list of the abbreviations used on Ford Motor Co. vacuum diagrams.
