

1974-79 EXHAUST EMISSION SYSTEMS

Fiat Catalytic Converters

3-137

All Models

DESCRIPTION & OPERATION

Catalytic converter is used to reduce exhaust emissions by means of a chemical reaction as hot exhaust gases pass through the treated material contained in the converter. The converter changes the toxic gases coming from the engine to harmless carbon dioxide and water.

An indicator light on the instrument panel glows at replacement time for the catalyst.

MAINTENANCE

After checking the catalytic system for correct operation, reset warning light as follows: Locate odometer switch in engine compartment, remove lockwire, unscrew cap, then turn screw switch to "50".
