

1974-79 EXHAUST EMISSION SYSTEMS

Lancia Catalytic Converters

3-265

1977 All Models

DESCRIPTION

Used to reduce exhaust emissions by means of a chemical reaction as hot exhaust gases pass through the treated material contained in the converter. The converter changes the toxic gases coming from the engine to harmless carbon dioxide and water. An indicator light on the instrument panel indicates replacement time for the catalyst.

MAINTENANCE

1) Every 25,000 miles, the "Replace Catalyst" warning light will come on. At this time, the catalytic converter should be replaced and the warning light activator switch should be reset.

2) Check "Slow Down" indicator light and catalytic converter thermocouple for proper operation by turning ignition switch to "MAR". "Slow Down" light must come on and go out after 2-5 seconds. If system does not function as described, check terminal connections and change parts as necessary.
